SUMMARY

Full Stack Developer with 2+ years of hands-on experience building production web applications using **Next.js, React, Node.js, Express, and MongoDB**. Strong focus on designing clean REST APIs, efficient database schemas, authentication systems, and scalable backend architecture. Passionate about writing maintainable code and delivering reliable full-stack solutions.

Developed a video streaming system using **Python, FastAPI, FFmpeg, and GStreamer**. FastAPI is used to build the backend APIs for video upload, processing, streaming, and stream management. **FFmpeg** handles video transcoding, compression, format conversion, resolution changes, and generation of streaming formats such as HLS. **GStreamer** is used to build efficient real-time media pipelines for processing and streaming video/audio data with low latency.

PROFESSIONAL EXPERIENCE

Full Stack Developer

O'cyber

06/2024 – Present

Islamabad

- Developed and maintained **scalable full-stack web applications** using **Next.js, React, Node.js, and Express**, focusing on performance, reliability, and maintainable architecture.
- Designed and optimized **MongoDB database schemas, aggregation pipelines, indexes, and queries**, improving data consistency and application performance.
- Developed and integrated **secure RESTful APIs** between frontend and backend services, implementing authentication, authorization, validation, and efficient data handling.
- Built **responsive, pixel-perfect user interfaces** using **React, Next.js, and Tailwind CSS**, ensuring consistent experiences across desktop, tablet, and mobile devices.
- Developed reusable and scalable **React components and frontend modules**, reducing code duplication and improving maintainability across the application.
- Implemented **user authentication and authorization flows**, including protected routes, role-based access control, and secure session handling.
- Worked extensively with **API integration and backend business logic**, connecting frontend applications with databases and third-party services.
- Collaborated across the complete development lifecycle, from **database and API design to frontend implementation, testing, debugging, and deployment**.
- Identified and resolved **performance bottlenecks, UI issues, API errors, and database-related problems**, improving overall application stability and user experience.
- Followed modern development practices including **TypeScript, Git/GitHub, reusable architecture, code reviews, debugging, and Agile development workflows**.
- Worked closely with designers and team members to translate **Figma designs into accurate, production-ready interfaces** while maintaining design consistency and usability.
- Contributed to feature development from **initial requirements and technical planning through implementation, testing, and final delivery**, helping reduce development turnaround time.

Private

Worked remotely for 6 months on a **video streaming project** using **Python, FastAPI, FFmpeg, and GStreamer**. Developed and integrated backend APIs for video processing and streaming, worked with FFmpeg for transcoding and media conversion, and used GStreamer for real-time video/audio streaming pipelines. Collaborated remotely with the team, tested streaming workflows, fixed technical issues, and continuously improved the overall streaming performance and reliability.

EDUCATION

BS (cs)

2020 – 2024

The islamia university bahawalpur

Bahawalpur

Completed Bachelor of Science in Computer Science from Islamia University, building a strong foundation in software engineering, data structures, algorithms, and database management. Gained hands-on experience in full-stack web development using modern technologies including React, Next.js, and MongoDB throughout academic projects and coursework.

SKILLS

Full Stack Developer

Frontend: React, Next.js, TypeScript, Tailwind CSS, HTML5, CSS3, JavaScript Backend: Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control Database: MongoDB, Mongoose, Aggregation Pipelines, Schema Design Tools & Others: Git, GitHub, Postman, Vercel, Responsive Design

Video streaming developer

Experienced with Python, FastAPI, FFmpeg, and GStreamer for building video streaming applications. Skilled in video transcoding, real-time streaming pipelines, media processing, and backend API development.

LANGUAGES

- English — Professional Working Proficiency
- Urdu — Native / Fluent

COURSES

AI School Live Session Recordings & Resources Library

NAS Company

Completed AI School program by NAS Company, gaining practical knowledge of artificial intelligence concepts, machine learning fundamentals, and real-world AI applications through live session recordings and curated resource library. Enhanced understanding of how AI technologies can be integrated into modern software development workflows.

PROJECTS

Readlink

06/2025

Readlink project for user mangement

Readlink is a full-stack user management system built with Next.js and MongoDB that handles secure authentication, authorization, and complete user lifecycle management.

It features JWT-based login/registration, protected routes, and Role-Based Access Control (RBAC) with Admin and User roles.

An admin dashboard allows creating, updating, deleting, searching, and managing users, while regular users can update their profiles.

The backend uses Next.js API routes with MongoDB for efficient CRUD operations, clean schemas, and proper error handling.

This project demonstrates end-to-end full-stack development — from database design and secure APIs to a responsive frontend.

AI Support SaaS Platform

Next.js, Node.js, Express.js, MongoDB

- Developed a full-stack AI-powered Support SaaS application using **Next.js** for the frontend and **Node.js, Express.js, and MongoDB** for the backend.
- Implemented secure **REST APIs** for user authentication, data management, and AI support functionalities.
- Designed responsive and user-friendly interfaces with seamless integration between frontend and backend services.
- Built database schemas and managed application data efficiently using MongoDB.
- Implemented features such as AI-powered support responses, user management, and scalable backend architecture.
- Followed modern web development practices including API-based architecture, error handling, and secure data processing.

Beloz Language Services

HTML, CSS, JavaScript, Responsive UI

Developed a responsive **language interpretation and translation website** for Beloz, providing users with easy access to professional language solutions. The platform showcases **Video Remote Interpreting, Over-the-Phone Interpreting, In-Person Interpreting**, translation services, company information, and contact options.
